**Latar belakang:** Nelayan menduduki posisi tertinggi kedua gigi rusak, berlubang ataupun sakit yaitu 53,9%, gigi hilang karena dicabut atau tanggal sendiri 22,3%, gigi telah ditambal atau ditumpat karena berlubang 3,1%, gigi goyah sebanyak 13,4%. Pemeliharaan kesehatan gigi dan mulut sangat berperan dalam menentukan derajat kesehatan dari masing-masing individu, oleh karena itu motivasi dan perilaku pemeliharaan kesehatan gigi dan mulut yang kurang baik harus diubah. **Tujuan:** Mengetahui gambaran motivasi dan perilaku anak nelayan dalam pemeliharaan kebersihan gigi dan mulut di SDN 6 Pangandaran. **Metode:** Jenis penelitian yang digunakan yaitu deskriptif observasional. Pengambilan sampel secara *purposive sampling*. **Hasil:** Motivasi dalam pemeliharaan kebersihan gigi dan mulut terdapat pada kriteria sedang sebanyak 16 orang (53,3%), perilaku dalam pemeliharaan kebersihan gigi dan mulut terdapat pada kriteria sedang sebanyak 18 orang (60%), sedangkan hasil dari penelitian kebersihan gigi dan mulut anak nelayan kelas V di SDN 6 Pangandaran terdapat pada kriteria kurang baik sebanyak 21 orang (70%). **Kesimpulan:** Hasil penelitian ini bahwa motivasi dan perilaku yang masih sebatas sedang akan berdampak pada kurang baiknya kebersihan gigi dan mulut siswa kelas V di SDN 6 Pangandaran.
