**ABSTRACT**

**Background:** Dental and oral health is important in everyone's life including children, Children of primary school age are a vulnerable group to dental and oral diseases. Children's dental and oral health problems can affect children's growth and development (Hardika, 2018). **Objective:** Analyze the relationship between parenting attitudes, diet and oral hygiene of students of Wiriadinata Airfield Space Kindergarten School (Lanud) Tasikmalaya City. **Method:** Using research with a cross sectional approach. Research sample of kindergarten students and people. B1-class A total of 64 people used the total sampling technique. The research measurement tool used parenting attitude questionnaires, eating patterns and OHI-S examination sheets. **Results:** Results of filling out the parenting attitude questionnaire of the majority of good categories as many as 22 people (68.8%), minority categories less as many as 3 people (6.2%), filling out the questionnaire of parents' eating patterns at home the majority of good categories as many as 19 (59.4%), minority categories less as many as 2 people (6.2%), results of dental and oral hygiene examination of students (OHI-S), the majority of good criteria as many as 21 people (65.6%), The minority of bad criteria is 2 people (6.2%). The Spearman Rank correlation test obtained a p value - Value  $0.000 p < 0.05$  means that there is a relationship between parenting attitudes, diet and dental and oral hygiene of grade B1 students. **Conclusion:** There is a relationship between parenting attitudes, diet and dental and oral hygiene of kindergarten students. Space Class B1.

**Keywords:** Parenting attitude, diet, dental and oral hygiene of kindergarten students.
