ABSTRACT

Introduction: Patient satisfaction is defined as a comparison between the services or results received with patient expectations. The purpose of this study was to determine the relationship between the level of patient satisfaction with the quality of dental and oral health services at UPT Puskesmas Cikajang Garut Regency.

Method: using an analytical survey with *a crosssectional study approach*. The Purpose implementation of research at UPT Puskesmas Cikajang on September 4 – October 21, 2023. The number of samples was 52 people using *accidental sampling* techniques. Data collection using questionnaires. Statistical tests are used to analyze relationships between variables using *Spearman's rho Correlation test*. The results of the study on the level of patient satisfaction were very satisfied criteria (92.3%) and the quality results of dental and oral health services were good criteria (86.5%).

Result: statistical test obtained p value: 0.000 (<0.05) with correlation coefficient: 0.732.

Conclusion: that there is a high and unidirectional significant relationship between the level of patient satisfaction with the quality of dental and oral health services at UPT Puskesmas Cikajang Garut Regency.
