ABSTRACT

Background: Occupational Safety and Health (OHS) is an effort to protect workers and others who are in the workplace to avoid potential dangers or Work Accidents (KAK) that can occur. Occupational Safety and Health is one of the efforts to protect the workforce in dental and oral health care services. **Purpose :** Knowing occupational safety and health knowledge in dental and oral therapists at BPG Puskesmas Tasikmalaya City. **Methods :** The type of research used is descriptive research, namely to describe or provide knowledge of the object under study. Through sample or population data. The population in this study were 86 dental therapists, who were willing to be respondents, namely 50 dental therapists from 22 health centers at BPG Puskesmas Tasikmalaya City. The sampling technique used was purposive sampling. **Results :** The results of frequency distribution answers based on questionnaire research criteria on occupational safety and health knowledge showed that 0% of respondents were less hysteria, 14 people (28%) were moderately hysteria, 36 people (72%) were shouting well towards occupational safety and health knowledge. The results of the frequency distribution answer based on the criteria of knowledge research on the use of personal protective equipment showed that 0% of respondents were less hysteria, 0% of respondents were shouting enough, 50 (100%) were good at the knowledge of the use of personal protective equipment.
